Alex Morgan

Portland, OR • 555-010-0142 • alex@example.com • example.com/alex

Full-Stack Software Engineer

Product-focused software engineer building reliable web applications and thoughtful interfaces. Experienced in JavaScript, testing, integrations, and translating requirements into useful tools. Preserves source wording: résumé, café, “quoted text”, and an em dash — intact.

RELEVANT EXPERIENCE

Example Organization 1 **2025 - 2026**
Software Engineer **Portland, OR**

- Project 1.1: Built accessible application screens with JavaScript, reusable components, and careful keyboard interaction.
- Project 1.2: Improved production reliability with focused automated tests, explicit error handling, and practical release checks.
- Project 1.3: Worked with design and operations teams to translate complex requirements into clear, maintainable software.
- Project 1.4: Investigated slow data flows and simplified integration boundaries while preserving existing user behavior.

Example Organization 2 **2024 - 2025**
Application Developer **Remote**

- Project 2.1: Built accessible application screens with JavaScript, reusable components, and careful keyboard interaction.
- Project 2.2: Improved production reliability with focused automated tests, explicit error handling, and practical release checks.
- Project 2.3: Worked with design and operations teams to translate complex requirements into clear, maintainable software.
- Project 2.4: Investigated slow data flows and simplified integration boundaries while preserving existing user behavior.

Example Organization 3 **2023 - 2024**
Application Developer **Portland, OR**

- Project 3.1: Built accessible application screens with JavaScript, reusable components, and careful keyboard interaction.
- Project 3.2: Improved production reliability with focused automated tests, explicit error handling, and practical release checks.
- Project 3.3: Worked with design and operations teams to translate complex requirements into clear, maintainable software.
- Project 3.4: Investigated slow data flows and simplified integration boundaries while preserving existing user behavior.

Example Organization 4 **2022 - 2023**
Application Developer **Remote**

- Project 4.1: Built accessible application screens with JavaScript, reusable components, and careful keyboard interaction.
- Project 4.2: Improved production reliability with focused automated tests, explicit error handling, and practical release checks.
- Project 4.3: Worked with design and operations teams to translate complex requirements into clear, maintainable software.
- Project 4.4: Investigated slow data flows and simplified integration boundaries while preserving existing user behavior.

EDUCATION

Bachelor of Science, Computer Science
Example State University 2015 - 2019

CERTIFICATIONS

Example Web Accessibility Certificate **2024**
Example Learning Institute

SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Frontend: HTML, CSS, accessible interfaces, component systems
Engineering: Automated testing, Git, continuous integration, API integration
